OBJECTIVE

Software Engineer with 3+ years of experience building and maintaining production applications across **backend, frontend, and cloud infrastructure**. Strong hands-on experience with JavaScript, TypeScript, Node.js, REST APIs, asynchronous processing, distributed systems, Redis, Kafka, and AWS. Experienced in designing event-driven workflows, improving API performance, and owning features **end-to-end from design and implementation to deployment and production support**. Interested in building reliable, scalable platform components and backend systems.

SKILLS

Programming Languages	JavaScript, TypeScript, Python, SQL
Backend Engineering	Node.js, Express.js, REST APIs, API Design, JWT Authentication, Asynchronous Programming
Distributed Systems	Event-Driven Architecture, Message Queues, AWS SQS, Kafka, BullMQ, Redis Caching
Databases	MySQL, MongoDB, Cassandra
Cloud & Infrastructure	AWS (S3, SQS, CloudWatch), GCP (App Engine, Cloud Scheduler), Docker
Frontend	Angular, React, TypeScript, JavaScript, HTML5, CSS3, RxJS
Software Engineering	System Design, Object-Oriented Design, Microservices, Performance Optimization, Debugging
Tools & Integrations	Git, Postman, Firebase, Razorpay, Zoho CRM, Zoho Invoice, JIRA

EXPERIENCE

Software Engineer Jun 2026 – Present
InnerSpace Co-working, Kochi, India

- Designed a booking workflow using **Redis and BullMQ** to temporarily reserve assets, queue booking requests, and coordinate payment and confirmation processing, reducing the risk of concurrent booking conflicts.
- Improved API reliability and responsiveness by identifying redundant API calls and optimizing request flows to reduce unnecessary backend processing.
- Replaced continuously running Node.js cron processes with **GCP Cloud Scheduler**, triggering scheduled API endpoints and eliminating the need for an always-on scheduling server.
- Contributed to system design for booking workflows, reservation handling, and event-driven notification services.
- Integrated **Razorpay, Zoho CRM, and Zoho Invoice** to support payment processing, customer management, and invoice generation.
- Implemented Google Sign-In using Firebase Authentication and developed coupon-based booking with pricing and validation rules.
- Deployed and maintained production applications on **GCP App Engine**, including deployment monitoring, log analysis, and production support.

Software Engineer Nov 2023 – Jun 2026
ZeroNorth (Formerly Alpha-Ori Pvt Ltd), Chennai, India

- Developed production features for **SmartShip and SmartVoyager** using Angular, TypeScript, Node.js, and Express.js.

- Built an asynchronous XML generation pipeline to process thousands of derived tags using background jobs and queue-based processing.
- Designed and implemented REST APIs and reusable frontend components following modular software architecture principles.
- Reduced critical workflow processing time by **40%** by redesigning synchronous operations into an event-driven, queue-based architecture.
- Implemented asynchronous processing workflows using **AWS SQS, Kafka, and BullMQ** to improve processing efficiency and system scalability.
- Reduced API response times from approximately **2 seconds to 150–300 ms** using Redis caching.
- Improved production observability through structured logging and AWS CloudWatch monitoring.
- Owned business-critical features from design and development through deployment, earning the **Star Performer Award** for delivery and technical ownership.

Software Engineer Trainee Apr 2023 – Nov 2023
ZeroNorth (Formerly Alpha-Ori Pvt Ltd), Chennai, India

- Developed full-stack web applications using Angular, Node.js, Express.js, and MongoDB following Agile development practices.
- Built reusable UI components, integrated REST APIs, fixed production issues, and gained hands-on experience with scalable application development.

PROJECTS

AI Resume Analyzer

- Developed an AI-powered resume analysis platform using React, Node.js, Firebase, and LLaMA3 to evaluate ATS compatibility and generate improvement recommendations.
- Built REST API integrations and deployed application services using Vercel and Render.

Smart Verification System for Media Files
Tech Stack: Django, MySQL, Solidity

- Developed a blockchain-based system to verify the authenticity of media files.

Student Fee Management System
Tech Stack: Django, MySQL

- Automated student fee collection and record management for educational institutions.

EDUCATION

B.Tech in Computer Science and Engineering, College of Engineering, Kallooppara 2019 – 2023
Percentage: 84.4%

Higher Secondary (12th), St. Peter's HSS, Kurumpanadom 2017 – 2019
Percentage: 95%

Secondary School (10th), St. Peter's HSS, Kurumpanadom 2017
Percentage: 100%
